

AXEStTrack

The AXEStTrack locator is an affordable, fully integrated asset tagging and monitoring device suitable for any application requiring periodic autonomous position reporting and cost-effective wireless communication. It combines worldwide GSM communications with GPS location technology to provide periodic location and status reports. The AXEStTrack locator supports target applications by automatically determining and relaying location information.

The device is initially targeted for consumer automotive monitoring and recovery applications and services.

The AXEStTrack locator is self-contained in a durable, water-resistant housing, and provides indoor and outdoor position reports. Its enhanced GPS sensitivity mode allows it to operate in environments in which traditional GPS devices do not work.

The AXEStTrack locator is self-contained in a durable, water-resistant housing, and provides indoor and outdoor position reports. Its enhanced GPS sensitivity mode allows it to operate in environments in which traditional GPS devices do not work.

The AXEStTrack locator's dimensions are 5.25" x 2.5" x 1". The device weighs 3.6 ounces without batteries or optional modules. Its position is typically accurate within 20 feet horizontally and 35 feet vertically.

It can get its location position ("fix") in less than 90 seconds. The AXEStTrack locator is activated by installing a SMS-enabled SIM (Subscriber Identifier Module) card from a wireless carrier, and four AA batteries.

The device operates by periodically sending position reports when a vehicle is in motion, and can also be instructed by our tracking application to report position when a vehicle is stationary. Upon receipt of the message, the device can be queried by the application. The AXEStTrack locator can, for example, report more frequently or change any of its configurable parameters to meet application or end-user requirements.

The AXEStTrack locator by itself is part of a complete solution. To be operational, it requires a Mobile Service Provider and an online tracking portal or end-user application (see Fig. 1). The customer interacts with the application, such as AXES' vehicle monitoring system over the Internet. To this end, AXES is offering integrated online tracking to complete the tracking solution package.

Feature and Advantages

- Track Logging
- Geo-Fencing
- Speed Monitoring
- Battery powered or Vehicle Power
- 4 Nos AA batteries
- No External Wires or Antennas
- Programmable and periodic Location Reports
- SMS Text Messages
- Motion based reporting
- Enhanced sensivity
- GPS technology/GSM Communications
- Complete End user Device
- Web based control centre
- Mobile interface
- Easy to use configuration panel
- Trip start / end

- Built-in intelligence alerts the control centre when a vehicle halts at one location for more than the specified period of time
- Integration with SAP2
- MIS Reporting

Applications

- Logistic
- Transport Contractors
- Rent a Car / Limousine / Taxi Companies
- Public Transport Companies
- Food and beverage distributors
- Oil delivery companies
- Courier & Cargo service companies
- Ambulance and emergency service provider
- Utility service Companies
- Call Centre Pick-up Cabs
- Oil companies- for monitoring remote assets and equipments
